

FancyMenu Installation Guide

By BisectHosting

Abstract

This document is intended to outline and instruct BisectHosting partners with installing importing menu graphics to their modpacks. Menu layouts are already compiled and assembled by a BisectHosting Graphic Designer. This document will take you step-by-step to transfer the provided files.

Method 2: Manual Import	3
- Files - Importing the Mods - Importing the Menu Assets	3 4 4

Method 1: Automatic Import

Newer FancyMenu versions have introduced an automatic import feature which is a lot easier to use, but it's still a beta feature and may not always work. Please contact your designer if you're having a difficult time getting it to work. Usually, when this happens, we use the second method, which is manually importing the files (covered in the second half of the document).

Files

- **Mods (.jar):** FancyMenu, Konkrete, MixinBootstrap*, LoadMyResources*
- **Configuration Folder (/config)**
- **Instructions File (.pdf)**

(* = *Optional*)

Importing the Mods

1. Open your Modpack's instance directory
 2. Navigate to the **/mods** folder
 3. Drag and drop the jar files into the **/mods** directory.
 4. Restart your modpack to let FancyMenu and its' dependencies install the necessary configuration files.
-

Importing the Menu Assets

1. Launch your modpack
2. To view the FancyMenu GUI, use the shortcut **CTRL + ALT + C**

3. Click on the **Setup** button, select **Import, Enter Path to Setup**, and then paste the **path** to the folder the designer sent (Example: `C:\Downloads\RL_Menu\`)
4. All done! Enjoy your new menu.

Note: If something goes wrong during the installation process, please contact a designer and they'll be able to help!

Method 2: Manual Import

Having issues getting the automatic import feature to work? Try this instead.

Files

- **Mods (.jar):** FancyMenu, Konkrete, MixinBootstrap*, LoadMyResources*
- **Configuration Folder (/config)**
- **Instructions File (.pdf)**

(* = *Optional*)

Importing the Mods

1. Open your Modpack's instance directory
2. Navigate to the **/mods** folder
3. Drag and drop the jar files into the **/mods** directory.

4. Restart your modpack to let FancyMenu and its' dependencies install the necessary configuration files.
-

Importing the Menu Assets

1. Open your **modpack** directory.
2. Open the **config** folder
3. Drag and drop the **fancymenu** folder provided by the designer into your modpack's **config** folder.
4. If it prompts to overwrite the old files, select **Yes**.
5. All done! Enjoy your new menu.

Note: If something goes wrong during the installation process, please contact a designer and they'll be able to help!
